

# VARIOSTEP EDGE

A technological and information system for distribution network management combining features of dispatching and handling of customer business processes for overall energy management. Variostep EDGE is designed for smaller local systems (local distribution systems), energy communities, municipalities, etc.

It provides the collection and storage of data into 15 minute profiles or larger data granularity with the option of predictions and other user data analytics. The system also offers mass servicing of end consumers, including the preparation of data for invoicing and reporting. The system is ready for flexibility introduction and its development responds to changes in the energy market.

- ▶ **Variostep Edge** is a modern web application that allows for the servicing of activities of both the distributor and the vendor in one common environment, fully supporting the commodities of electricity, gas and heat and their prices.
- ▶ **Variostep Edge** offers a clear and intuitive environment for the collection and management of the measured data, servicing and addressing customer requirements, as well as reporting tools for the operator or a third party.
- ▶ **Variostep Edge** is a web portal for customers, with the option to review their invoice, consumption history and point of consumption history. It is an environment for the operator to disclose the information mandated by law.
- ▶ **The Variostep Edge solution** takes into account the renewable source boom because it allows for the management of energy derived from solar panels, bringing the benefits of energy savings.
- ▶ **The Variostep Edge solution** is suitable for the aggregation of flexibility, for the optimization of energy flows and for the management of renewable sources.

## Variostep Edge

- ▶ Web application for overall energy management.
- ▶ Designed for smaller local systems (local distribution systems, energy communities, aggregators, municipalities, commercial and industrial chains, sports facilities).
- ▶ It allows for the collection, administration and management of the measures data (electricity, gas, heat).
- ▶ One common environment for dispatching and servicing of customer business processes for overall energy management.

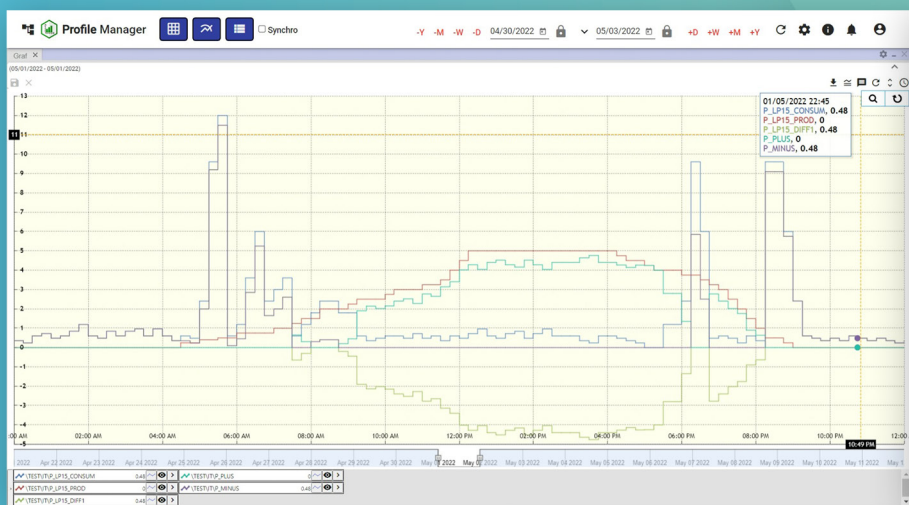

## A couple of words about us

We are a supplier of solutions for energy trading, energy and industry. Our solutions are aimed at energy suppliers, who provide their services to end clients, energy traders and energy management in industry. We have been on the market for 29 years and the Chartis report has recently included us in the elite club of **TOP 25 global technology players** on modern energy markets.

## Main advantages

- ▶ **For all commodities** - electricity, gas, heat and prices
- ▶ **Simple and intuitive control** - even if it processes a large amount of data
- ▶ **Both web and mobile version** - available wherever and whenever
- ▶ **Distribution and trade in one environment** - a combined system for two segments - one part for the vendor and one part for distribution
- ▶ **Processing of large amounts of data** (current values every second) - analytical outputs from these data are clear, simple and easily understandable
